

Lindau, Aarau: 30 June 2020

Liebherr Components and Reycom announce a strategic partnership for the next generation of industrial and connected IoT solutions Industry 4.0 and vehicles.

Made in Germany combined with Swiss quality.

Liebherr Components and Reycom – More Than IoT

Ready to use, safe and future-oriented – these are the demands that Liebherr and Reycom place on the products they develop together. This partnership specializes in durable overall IoT solutions that focus on the customer's benefit. The motto here is: deliver, switch on, work.

Future Made in Europe

The competencies of the two partners complement each other ideally. Liebherr draws on over 40 years of experience in manufacturing durable electronic components at its site in Lindau (Germany). Reycom from Aarau (Switzerland) has been supplying its customers with end-to-end solutions for TV, smart home and Internet of Things (IoT) for over 20 years.

Hardware & Software Made in Germany/Switzerland: Uncompromisingly Robust

Knowing what matters: Liebherr-Elektronik GmbH develops and produces high-quality electronics for some of the toughest industries such as the construction business or mining industries. With over a million components delivered, Liebherr has made machines all over the world smarter, safer and more environmentally friendly – on land, at sea and in the air. In addition to its own development and production facilities, Liebherr operates its own test center for electronics at its Lindau site in Germany. Liebherr's electronics stands for exceptional performance, long service life and high availability.

Reycom contributes its experience in the areas of TV, smart home and embedded hardware and software solutions and its collaboration with the technology leaders in the fields of security, cutting-edge technology, over-the-air update, AI/KI, voice, machine learning and cloud solutions.

The aim of the strategic partnership between Liebherr Components and Reycom is to further develop the next generation of industrial IoT and connected vehicle solutions internationally and to offer them to their customers. Decades of experience now work hand in hand – first-class IoT gateways, robust smart cameras and tablets combined with the latest, secure and best software, cloud and applications.

Everything from a single source: made in Germany with Swiss finish.

Liebherr-Component Technologies AG:

The components division of the Liebherr Group specializes in the development, design, production and remanufacturing of high-performance components in the fields of mobile electronics and mechanical, hydraulic and electrical drive and control technology. Liebherr Components has decades of experience in the field of high-quality components used in cranes and earth-moving equipment, in the mining industry, maritime applications, wind turbines, vehicle engineering or in aviation and transport technology. Synergy effects from the other product areas of the Liebherr Group are used sensibly to drive forward the constant technological development.

Reycom AG:

Reycom is a Swiss company, Original Equipment Manufacturer (OEM) and system house. Our teams collaborate with specialists from Europe, Asia and the US to bring together innovative spirit and state-of-the-art solutions at affordable prices. Our hardware and software engineers have a multi-year track record of designing and producing equipment and solutions.
